

To whomsoever it may concern,

From the moment I embarked on my college journey, I found myself drawn to the multifaceted world of technology. My experiences in coding, understanding backend intricacies, and crafting engaging front-end UI/UX designs left me inquisitive about the "why" behind it all. After extensive research, I discovered that every technological marvel finds its purpose in the form of a product. This epiphany ignited my desire to unravel the essence of products and learn how to manage them effectively.

Product management, I realized, is the amalgamation of design, technology, and business acumen. This realization fueled my determination to delve deeper into this field. I began my exploration by pursuing the Certified Scrum Product Owner (CSPO) certification. Additionally, my role as an event manager for YICII REC, a socio-entrepreneurial club in college, provided me with valuable experience in managing and coordinating events.

As a council elect, I assumed the position of Co-chair for the Rural Initiative Vertical, where I organized an event called "Redefining Red." This initiative aimed to educate children in Porur Government School about menstrual hygiene and break the taboo surrounding menstruation. These experiences nurtured my leadership and management skills, further fueling my passion for product management.

Furthermore, my technical expertise was honed during my tenure as a SAP trainee at Kaar Technologies. Working on portal projects and gaining hands-on experience with technologies like SAP UI5, SAP BTP, SAP OData Services, and more broadened my skill set. In addition to this, I lead a team in designing, developing the "University Admission Eligibility Predictor" project dividing it into 4 sprints during my college days and led another project focused on "Orchestrating a GAN Architectural-Based Pipeline for Musical Instrument Chord Conversion" and proceeded the paperwork to "ICEEICT" to get Scopus indexed. These experiences solidified my commitment to the world of product management.

Currently, I am actively working on building my portfolio, showcasing my proficiency in product management through PRD creation, wireframes, and product teardowns. I am excited to leverage my diverse background in technology, leadership, and problem-solving to excel in a product management role and contribute to your team's success.
